

CHANGELOG

Nova Video Player changelog

v6.4.26 /!\ pre-release - 2026-02-01

This release addresses regressions found in last avos media engine audio pipelines fixes

- Fix: avoid using stale heard-time for speed changes on android_sync=1 when delay is invalid.
- Fix: hold last-good delay on android_sync=0 when timing becomes invalid to prevent sync loss in long runs.
- Fix: include atempo filter latency in heard-time when timing is invalid.
- Fix: stabilize resume sync with delay-valid streak gating.
- Chore: remove debug-only speed-change logging to fix build.

To be on the safe side, by default android frame synchronization delegation is off, dynamic audio delay estimation and atempo ffmpeg based audio speed are enabled.

[Changes][v6.4.26]

v6.4.25 /!\ pre-release - 2026-01-31

- Scraper optimizations: speed and robustness in detection enhancements
- Many lipsync and audio/video synchronization optimizations (capturing corner cases with bogus audiotrack devices such as google streamer 4k)
- Capability to scrape from media database when there is already a corresponding entry resulting in boost in scrape performance when dealing with multiple network shares protocols pointing towards same files
- Pretty notifications during scrape process
- Properly detect HDMI ARC/eARC for passthrough
- Floating player size fixes

- More surface stretching options and aspect ratio fixes enabling to force aspect ratio on bogus videos
- New player UI tri-state button to manage different layouts for displays with cutouts

This release contains major contributions from @leeroy.

From now on frame synchronization, dynamic audio delay estimation and atempo ffmpeg based audio speed are the default modes.

[Changes][v6.4.25]

v6.4.24 /!\ pre-release - 2025-12-17

- Scraper optimizations (more to come)
- Fix floating player playback regression
- More aspect ratio bugfixes and more accessible and self explanatory icons (more to come)
- Fix video playback stuttering on high latency/large jitter variance devices such as google streamer 4k
- Improve lipsync by removing artificial audiotrack audio pipeline delay bias
- Nicer scrape notification on phone monitoring files processed
- Do not generate all thumbs for every video, only for non scraped on demand

This release contains major contributions from @leeroy.

Please try out enabling android frame synchronization, dynamic audio delay estimation, and the new atempo ffmpeg based audio speed with passthrough disabled.

[Changes][v6.4.24]

v6.4.23 /!\ pre-release - 2025-12-07

- Audio speed: use atempo ffmpeg based filter instead of audiotrack to avoid compatibility issues with some hard wares
- Many audio passthrough fixes for universal AC3 recode and nova or system encapsulation
- New smart recently categories (off by default) changing "Last added" and "Last played" to "New to watch" and "Continue watching" with the goal of de-cluttering the rows. It only lists scraped content and only last episode viewed or new are displayed to avoid duplication. New section only displayed unwatched content.
- New projector mode aligning visible part of the video to the top of the screen

- Added force aspect ratio for coping with badly encoded videos (4:3, 16:9, 1.85:1, 2.39:1)
- Aspect ratio icons now reflect current aspect ratio instead of next one
- Fix external subtitles disappearing for remote shares video files
- Fix non-scraped videos box disappearing in leanback Main-Fragment
- Fix external display video rendering in small format regression
- Address cannot find tv show on manual search for non scraped content
- Honor VPN setting in connectivity check
- Fix audio/video desync when using Android frame posting or smoother video playback
- Verify files exist on filesystem before hiding them on USB volumes causing media library loss on Android TV using USB HDDs (regression)
- Capacity to have legacy UI persistent on Android TV interface in nova settings
- Address blue screen of death happening sometimes
- Add option to hide player controls when paused for 5 seconds
- Webdav: send basic auth in UTF-8 and fix credential encoding
- New Android TV preferences row material icons with clearer visible focus
- Add non scraped videos category in phone/tablet UI browser
- Add VTT subtitles support
- Force option consistency in settings
- Fix thumbnail creation for non scraped videos (needs to be enabled through settings for network shares)
- Remove foreground services (again) not to upset Google and delay application publication (nova needs to remain in foreground for media scan to complete)
- Trakt implement new device based login for android TV
- Sync and traffic optimizations for trakt to avoid account locking

This release contains major contributions from @leeroy.

Please try out android frame synchronization enabled, dynamic audio delay estimation, and the new atempo ffmpeg based audio speed with passthrough disabled. ~

[Changes][v6.4.23]

v6.4.22 /!\ pre-release - 2025-11-18

This is a pre-release since it contains some large changes on audio pipeline that deserves some testing.

- Audio passthrough: delegate IEC encapsulation to Android for mode 2 and keep mode 1/3 on nova own IEC encapsulation. Rationale is that mediatek based devices (firestick 4k max and google streamer 4k) weirdly fails audio passthrough for EAC3 content (reverts to multichannel PCM) making mode 1 a more "universal" mode
- Many fixes regarding audio passthrough proper initialization
- Honor VPN setting in connectivity check to fix tailscale etc. remote access
- Complete hide watched videos from library functionality (thx @leeroy)
- Fix on leanback non scraped video box not showing sometimes

[Changes][v6.4.22]

v6.4.21 /!\ pre-release - 2025-11-16

This is a pre-release since it contains some large changes on audio pipeline that deserves some testing.

- Fix regression with passthrough deactivated leading to stereo output
- Increase robustness of audio pipeline creation following rearchitecture
- Take into account AV receiver reported number of PCM channels capability

[Changes][v6.4.21]

v6.4.20 /!\ pre-release - 2025-11-15

This is a pre-release since it contains some large changes on audio pipeline that deserves some testing.

WARNING: there is a regression that sets only stereo output, new release soon...

- Rearchitect audio pipeline for more robust passthrough and complete AC3 recoding passthrough implementation
- Fix excessive battery consumption regression
- Videos are displayed with release date sorting in videos by year fragments (proper functioning requires full movies re-

scrape since it is a new information element added to the database)

- Option to remember brightness level (thx @Leeroy)
- All native binaries are 16kB aligned in compliance with Google rule and should result in faster app loading
- Fix external display video rendering in small format
- Fix video pause state not being preserved on screen wake-up
- Fix video resume point not being preserved on screen wake-up after display timeout
- Address cannot find tv show on manual search for non scraped content
- De-duplicate in last added videos multiple video of identical tv show episodes or movies
- Subtitle enumeration caching to increase efficiency and remove redundant checks
- Force audio passthrough turned off by default: otherwise it could force non supported audio format to be sent to AV receiver
- Nicer round edges Video cards on phone/tablets (thx @Leeroy)
- Finish option to hide videos from media library (thx @Leeroy)
- jsch upstep to 2.27.6 and okhttp3 logging-interceptor to 5.3.0
- Stability enhancements

[Changes][v6.4.20]

v6.4.19 release - 2025-11-03

- Fix selecting audio track on video with multi audio tracks leading to no sound
- Fix -1 no Internet error when trying to login to trakt on some devices
- Fix audio speed not selectable on devices with no audio passthrough capability

[Changes][v6.4.19]

v6.4.18 release - 2025-11-02

- Video fluidity: schedule MediaCodec buffers with releaseOutputBufferAtTime keeping sink timing management done by avos with higher video workers thread priority (should be compatible with TVs using motion compensation)
- Smarter trakt synchronization method saving bandwidth and handling multiple devices (major refactoring)
- Fix some video samples playing choppy at start but ok after a seek
- Fix preserving current playback time when switching to floating player

- Better WebDAV 302 redirect handling (thx @alonginwind)
- Many menu settings consistency checks to prevent selecting option when not available (i.e. audio passthrough when no hdmi/spdif, smoother scrolling, etc.)
- Generate thumbnails only if there is no poster available
- On Android TV get back to first position of last played row instead of previous position if a video has been played
- Many stability enhancements addressing sentry reported crashes
- Switch to parametrized logback syntax to avoid unnecessary arguments evaluations when not logging is configured (performance optimization)
- Upsteps: jsch 2.27.5, tmdb-java 2.13
- For universal audio passthrough, decode PCM then reencode to AC3 all streams even the videos with (E)AC3 tracks to benefit from audio filters (night mode, audio boost). Side effect: lose AC3/Atmos JOC.

NOTE: option "Android frame timing" suffers from A/V desync when doing successive play/pause/play. It is not ready yet.

Please report any regression on trakt sync.

[Changes][v6.4.18]

v6.4.17 release - 2025-10-20

- fix AV sync lost after pause using passthrough (disable dynamic AV delay estimation when in passthrough mode and revert to `AudioSystem.getOutputLatency()` which gives better result than `AudioTrack.getLatency()`)
- increase performance using parametrised logging
- avos (native multimedia player) host simulator is back using SDL for debugging
- supernova external package support (but what is this...)

[Changes][v6.4.17]

v6.4.16 release - 2025-10-19

Major new release with new features!

- New Audio/Video delay dynamic estimation to get better synchronisation especially for bluetooth headsets
- Add new universal passthrough mode with AC3 5.1 recoding of non AC3 streams. The primary goal is to help AndroidTV TVs that are using a sound bar via ARC (not eARC) which payload cannot sustain multichannel PCM output

- New seamless audio speed (not based on seek anymore) mode enabling various playback speed from 0.05x to 2.00x. Though accessible through menu/tile while playing, various shortcuts are enabled described in [FAQ](#). Control is also mapped to next/prev track available on some remotes (e.g. [Ugoos UR02 BT remote](#)).
- UPnP uses jupnp instead of deprecated cling
- Fix NFO and srt generated with size 0 using smbj SMB implementation
- ffmpeg 8.0 upstep
- Fix various java leaks (potentially addressing the blue screen of death requiring reboots)
- New media database, network shortcuts and credentials export/import creating/using /sdcard/Android/data/org.courville.nova/files/backup.zip
- Implement downmix fallback when ffmpeg is enable to detect audio channel mapping (seems to happen somehow), thx @Leeroy

Note the apk is heavier because ac3recode requires new ffmpeg libraries.

TO TEST: please enable in option "Android frame timing" for testing, it should improve video fluidity.

[Changes][v6.4.16]

v6.4.15 release - 2025-10-06

- fix internal storage scan OOM regression
- avoid to download backdrop glitch on leanback on next episode VideoInfo when backdrop should not be changed
- fix video sync regression
- fix downmixing
- manage multiple usb disks with hide/unhide strategy enabling incremental faster rescanning
- network scan and scrape performance enhancements

[Changes][v6.4.15]

v6.4.12 release - 2025-09-28

- take more channel layouts into account for audio stereo downmix
- fix video import regression

[Changes][v6.4.12]

v6.4.11 release - 2025-09-27

- avoid USB/SMB rescans and medialib loss
- dynamic audio channel mapping
- fix trakt login window and automatic folder rescan regressions
- fix various A/V desync
- improved subtitle rendering (justification/multilines)

[Changes][v6.4.11]

v6.4.9 release - 2025-09-14

- fix a potential audio/video sync regression

[Changes][v6.4.9]

v6.4.8 release - 2025-09-13

- new seek based audio speed implementation
- gestures for audio speed (check FAQ)
- upsteps: boost 1.89, libtorrent 2.0.11, torrentd is 16K aligned
- process resume position when using nova as external player
- fix A/V desync with flac audio tracks
- loaders speed improvements via database indexing
- fix collections getting only one movie or being empty
- adopt an retry mechanism to check network shares availability to allow NAS servers to wake up from suspend before declaring the server not available (should help with folders declared not available)
- scape/scan services are back to foreground dataSync processes to allow operation with nova in background (will require convincing with google for play update)

[Changes][v6.4.8]

v6.4.5 release - 2025-07-06

- stability enhancements

[Changes][v6.4.5]

v6.4.4 release - 2025-07-04

- fix AV1 playback/seek on pixel9 g5 and mediatek devices (google streamer and firestick 4k max)
- fix nvidia shield external USB storage subtitle download
- stability enhancements

Note: apk is now larger because so libs are stored uncompressed following new Google gradle changes for device optimizations (storage, app start time, upgrade).

[Changes][v6.4.4]

v6.4.3 release - 2025-05-21

- stability enhancements

[Changes][v6.4.3]

v6.4.2 release - 2025-05-10

- fix video paused lost after screensaver regression
- many stability enhancements

[Changes][v6.4.2]

v6.4.1 release - 2025-04-28

- target SDK 35, raise min SDK to 23 (Android 6.0)
- rework player UI to comply with new edge to edge display constraints and avoid round display borders
- new gfx subtitle rendering and scaling logic following video view format
- blacklist recycle bins on popular NAS
- fix audio delay picker focus on Android TV
- new subtitle title format
- upgrade ffmpeg to 7.1.1 and dav1d to 1.5.1
- fix external player stopping after a while (thanks @wasky)
- stability enhancements

[Changes][v6.4.1]

v6.3.9 pre-release - 2024-12-07

- revert to ffmpeg 4.4.5 since upgrade breaks passthrough
- fix performance hit when using trakt after video information retrieval
- target SDK 34 to comply with Google API rules and remove foreground dataSync processes not granted to nova by Google

Important note: due to limitations imposed by Google when switching to API 34, foreground processes have not been granted to nova for background video media information retrieval. This means that nova cannot scan videos in background and full scan needs to be performed when nova is in foreground. Coping with this constraint required some intrusive modifications that could result in some regressions and debug: hence the pre-release tag.

[Changes][v6.3.9]

v6.2.56 pre-release - 2024-02-04

- UPnP network shares: use jupnp Java library instead of EOL cling
- proguard cleanup /\ could cause some regressions

This is an experimental pre-release: please report any issue with UPnP here <https://github.com/nova-video-player/aos-AVP/issues/74>

[Changes][v6.2.56]

v6.2.42 pre-release - 2024-01-01

- Thinner player controller volume/seek bars
- Fix ftp not working due to time dependency
- Stability enhancements

[Changes][v6.2.42]

v6.2.41 pre-release - 2023-12-30

- Faster local/USB storage scan at application start

Please provide feedback if you experience any issue with local/HDD storage indexing

[Changes][v6.2.41]

v6.2.26 pre-release - 2023-09-21

- Remove `MANAGE_EXTERNAL_STORAGE` permission since denied by Google Play (was allowed on Internal release but not Production ones...)
- Fix deactivate Dolby Vision setting
- Audio speed when enabled can be incremented/decremented via `CHANNEL UP/DOWN` or `NEXT/PREVIOUS TRACK MEDIA` remote keys

[Changes][v6.2.26]

v6.2.25 release refused by Google - 2023-09-08

- Fix DTS passthrough not working on some devices

NOTE: publication rejected by Google since nova is not allowed to use `MANAGE_EXTERNAL_STORAGE` though many other video player have managed to get it:

```
package: com.kmplayer
uses-permission: name='android.permission.MANAGE_EXTERNAL_STORAGE'
package: org.xbmc.kodi
uses-permission: name='android.permission.MANAGE_EXTERNAL_STORAGE'
package: com.mxtech.videoplayer.ad
uses-permission: name='android.permission.MANAGE_EXTERNAL_STORAGE'
package: video.player.videoplayer
uses-permission: name='android.permission.MANAGE_EXTERNAL_STORAGE'
package: com.kmp.video
uses-permission: name='android.permission.MANAGE_EXTERNAL_STORAGE'
package: com.mine.videoplayer
uses-permission: name='android.permission.MANAGE_EXTERNAL_STORAGE'
package: org.videolan.vlc
uses-permission: name='android.permission.MANAGE_EXTERNAL_STORAGE'
```

Result next release will not have this permission. I am not sure yet of collateral effects upgrading for those who installed this pre-release manually.

Message to Google:

For good reasons Google restricts `MANAGE_EXTERNAL_STORAGE` permission since API31. Nova thus switched to MediaStore API. As a consequence nova is only able to see files registered as Media files by Google (missing video/subtitles formats such as ASS & NFO files).

These files are not modifiable nor visible from nova when using local storage (incl. USB HDDs). This creates loss of functionality & incomprehension from nova users. Numerous appeals were issued & proper request filed for being granted the permission with explanation video. Only got default "no answers"/"not compliant" without having a Google support taking time to understand/review the case properly. Note that many other video players have the wanted `MANAGE_EXTERNAL_STORAGE` permission: e.g. VLC, mx player, video player all format, Video Player KMP, kodi... I consider this as unfair treatment and discrimination. Sad that an app that has almost 500k active users and 1.5M downloads on Google Play cannot get proper attention from Google.

[Changes][v6.2.25]

v6.2.24 pre-release - 2023-09-03

- Enhanced network shortcut URI format check to avoid crashes when users inputs non valid entries

[Changes][v6.2.24]

v6.2.23 pre-release - 2023-09-01

- Many stability enhancements
- Fix cannot open video on webdav(s) network share in some cases

[Changes][v6.2.23]

v6.2.22 pre-release - 2023-08-29

- Fix black screen playback on ONN and other Android TV 12 devices
- Fix capability test to read external storage regression due to `MANAGE_EXTERNAL_STORAGE` introduction

[Changes][v6.2.22]

v6.2.21 pre-release - 2023-08-28

- Permission checker: fix crash seen with MAN-AGE_EXTERNAL_STORAGE permission on some Android versions
- Scrape enhancement: do not skip TV shows with no poster on TMDB in results when there is no other one proposed

[Changes][v6.2.21]

v6.2.20 pre-release - 2023-08-27

- Support more scrape and subtitle languages
- Display audio/sub track titles
- Fix hdd subtitles download
- Many scrape enhancements (name cleanup removing brackets, solving long lasting bug on considering locale movie title, better show detection)
- This pre-release has MANAGE_EXTERNAL_STORAGE permission that seems to be allowed on Google Play finally for nova (TBC on full deployment): fixes issues not being able to process NFO/ASS and other files not considered as multimedia by Android library or not being owned by nova
- Integrate Slovak contributed translation
- Upgrade smbjs to 0.12.2 (fixes SMB faster implementation playback issues)
- Internationalization: all ISO639.(2(b)|3) 2/3 letter codes rely now on Android (still managing exceptions) Subtitle "None" is listed as first item in subs selection
- Fix crash at start on devices with API<30 (Android 11)

[Changes][v6.2.20]

v6.2.13 pre-release - 2023-05-26

- smbjs: fix subtitles download
- trakt: fix signing focus issue on Android TV

[Changes][v6.2.13]

v6.2.12 pre-release - 2023-05-25

- smbjs: increase robustness (fix timeout regressions, catch API errors)

[Changes][v6.2.12]

v6.2.11 pre-release - 2023-05-21

- smbjs: fix "empty folder issue" when connecting to network shortcut

[Changes][v6.2.11]

v6.2.10 pre-release - 2023-05-21

- Add sort video option when browsing by folders
- Fix smbjs folder delete
- Make smbjs use bouncycastle security provider

[Changes][v6.2.10]

v6.2.8 pre-release - 2023-05-10

- perfect smbjs stability and SMB settings logic

[Changes][v6.2.8]

v6.2.7 pre-release - 2023-05-08

- Add sshj new network shares support (alternate SFTP)
- Add an option to use smbjs by default instead of jcifs-ng (not SMB1 compatible)
- Add an option to use sshj by default instead of legacy sftp support
- Webdav write support
- smbjs and webdav stability improvements

[Changes][v6.2.7]

v6.2.5 really experimental pre-release - 2023-04-22

/!\ Not for the faint of the heart: subject to crashes.

- smbj stability improvements (perhaps not yet stable)

[Changes][v6.2.5]

v6.2.4 really experimental pre-release - 2023-04-22

/!\ Not for the faint of the heart: subject to crashes.

- smbj stability improvements (perhaps not yet stable)

[Changes][v6.2.4]

v6.2.3 really experimental pre-release - 2023-04-22

/!\ Not for the faint of the heart: subject to crashes.

- smbj stability improvements (perhaps not yet stable)

[Changes][v6.2.3]

v6.2.2 really experimental pre-release - 2023-04-21

/!\ Not for the faint of the heart: subject to crashes.

- Add smbj SMB2+ implementation capable of higher throughput than jcifs-ng (for now). smbj network shortcuts need to be added manually (no discovery in this release)
- Add webdav write support

[Changes][v6.2.2]

v6.1.5 github release - 2023-03-31

- Be sure to process year provided in movie files to increase scrape accuracy
- Fix regression in VideoLoaders

[Changes][v6.1.5]

v6.1.2 github release - 2023-03-20

- Enhance webdav stability
- Fix all videos icon boxes not getting updated on AndroidTV
- Fix loss of video database content after exiting/re-entering the app on AndroidTV

[Changes][v6.1.2]

v6.1.1 github release - 2023-03-09

- Add webdav network share support
- Add network shortcuts support for all network shares

[Changes][v6.1.1]

v6.0.78 pre-release - 2022-11-04

- Add option to not apply audio passthrough if AV receiver does not support codec
- Fix external storage videos perceived as not indexed on Android TV boxes

[Changes][v6.0.78]

v6.0.77 pre-release - 2022-10-28

- Re-enable experimental playback speed control but avoid to enforce change of speed if 1.0x is selected
- Fix network share videos staying in movie collection after deletion

Warning: this is a pre-release with some media db change, use for testing only.

[Changes][v6.0.77]

v6.0.74 pre-release - 2022-10-16

- Target Android API32
- Experimental playback speed control
- Do not apply audio passthrough if receiver does not support codec use and revert to PCM multichannel decoding instead
- Fix some local video files not indexed on recent Android
- ffmpeg 4.4.3, openssl 1.1.1r, androidx library updates
- Stability enhancements

[Changes][v6.0.74]

v6.0.68 pre-release (SMB experimental) - 2022-06-12

- enable SMBv3
- add possibility to browse/add SMB network share manually by URI on Android TV
- 2022 year movie banner on Android TV

[Changes][v6.0.68]

v6.0.61 pre-release - 2022-04-14

- Stability enhancements
- ffmpeg 5.0.1, dav1d 1.0.0, opus latest master upsteps (please report any **regression** on multimedia playback)

[Changes][v6.0.61]

v6.0.58 pre-release - 2022-04-04

- Stability enhancements
- Sentry debug backend integration for crashlytics

[Changes][v6.0.58]

v6.0.55 pre-release - 2022-03-27

- Display content rating and better audio/resolution tag on lean-back

[Changes][v6.0.55]

v6.0.52 pre-release - 2022-03-11

- Fix fdroid build

[Changes][v6.0.52]

v6.0.51 pre-release - 2022-03-11

- Fix crash happening during scrape
- Stability enhancements

[Changes][v6.0.51]

v6.0.50 pre-release - 2022-03-08

- Fix tvshow rescrape having same name
- Stability enhancements

[Changes][v6.0.50]

v6.0.49 pre-release - 2022-03-06

- Decrease UI glitch on browse by TV show on phone UI
- Stability enhancements

[Changes][v6.0.49]

v6.0.48 pre-release - 2022-03-04

- Fix widget not launching video
- STOP remote button stops player
- Make rescan storage setting work
- Stability enhancements

[Changes][v6.0.48]

v6.0.47 pre-release - 2022-03-01

- Scrobber threshold raised to 90%
- Fix crash changing info on tvshow
- Add adult scrape hidden option NOT on google play
- Blacklist nova scrape files for initial video import
- Swedish translations
- Fix NFO processing not working on SMB share
- Fix scrape in loop

[Changes][v6.0.47]

v6.0.46 pre-release - 2022-02-18

This release is based on minSDK 21 targetSDK 31, AndroidX libraries, NDK-r23b, ffmpeg 4.4.1

- Writer tag for tvshow retrieved on tmdb
- Scraper enhancements
- No more next episode jumping button on TV UI back from played video
- Translations: Swedish and Traditional Chinese progress
- Speed up initial local storage video import blacklisting whatsapp files before import
- WARNING: media db upgrade (any downgrade will wipe out your meta data)

[Changes][v6.0.46]

v6.0.43 pre-release - 2022-02-04

- Add https streaming support
- Fix wrong application name

[Changes][v6.0.43]

v6.0.41 pre-release - 2022-02-01

This release is based on minSDK 21 targetSDK 31, AndroidX libraries, NDK-r23b, ffmpeg 4.4.1

- Truly (!) eliminate sponsor link causing application rejection. Link was only visible for sideloaded apk but not for GooglePlay installation. Google refuses to check this point.
- Traditional Chinese translations

[Changes][v6.0.41]

v6.0.40 internal release - 2022-01-31

This release is based on minSDK 21 targetSDK 31, AndroidX libraries, NDK-r23b, ffmpeg 4.4.1

- Eliminate sponsor link causing application rejection. Link was only visible for sideloaded apk but not for GooglePlay installation. Google refuses to check this point.
- Remove application name translation. Google test translates Czech and Portuguese "nova video player" back to English to "new video player" causing rejection. Other applications like "nova launcher" do not face such issue.
- Reformat trakt login dialog to keep track of watched videos: it causes rejection without reason provided

[Changes][v6.0.40]

v6.0.37 pre-release - 2022-01-14

This release is based on minSDK 21 targetSDK 31, AndroidX libraries, NDK-r23b, ffmpeg 4.4.1

- Make sponsor link enabled as compilation option.

[Changes][v6.0.37]

v6.0.36 Google play internal (non public) release - 2021-12-23

This release is based on minSDK 21, targetSDK 31, AndroidX libraries, NDK-r22, ffmpeg 4.4.1

- Movie collections/sagas support on Android TV

- Separate animation/movies/series sections on Android TV
- Faster TV shows media information retrieval
- Report properly DTSHD & DTSHD MA
- ffmpeg 4.4.1 & dav1d 0.9.2 upstep
- MDNS samba discovery
- New refresh rate selection algorithm optimizing judder effect
- Add domain option to samba network credential dialog
- Optimize network shares rescan speed when files deleted/re-named
- Dolby vision support
- Binge watch mode
- Fix trakt tvshow sync
- Target API31 (warning: relocation of nfo/jpg for local storage videos)
- WARNING: media db upgrade (any downgrade will wipe out your meta data)

[Changes][v6.0.36]

v4.2 API28+AndroidX beta release - 2019-04-27

Unstable branch: this release is based on minSDK 21, targetSDK 28, AndroidX libraries, NDK-r20, ffmpeg 4.2.

- Option to have landscape fullscreen video on display with cutouts
- AndroidX migration
- Poster/backdrop zoom on AndroidTV via long press
- Improve stability of phone/tablet UI after API28 migration
- New A-Z orb option in All TV shows/Movies for alphabetical order browsing
- New all/not viewed orb option in All TV shows/Movies for limiting browsing to all/not viewed videos

[Changes][v4.2]

v3.6 Google Play beta release - 2019-04-27

Testing branch: this release is based on minSDK 21, targetSDK 27, NDK-r20, ffmpeg 4.2.

- Upgrade to latest ffmpeg and dav1d soft codecs

[Changes][v3.6]

v3.5 release candidate - 2019-04-17

Testing branch: this release is based on minSDK 21, targetSDK 27, NDK-r20, ffmpeg 4.2.

- Fix software decoding on pre-M Android versions

[Changes][v3.5]

v4.1 API28 beta release - 2019-04-08

Unstable branch: this release is based on minSDK 21, targetSDK 28, NDK-r19, ffmpeg 4.2.

- New video overview
- Leanback style settings on AndroidTV
- Add recently added TV channels
- Improved subtitles picker wizard look
- API28 migration

[Changes][v4.1]

v3.4 special SMBv2/3 test release (experimental) - 2019-03-18

Testing branch: this release is based on minSDK 21, targetSDK 27, NDK-r19, ffmpeg 4.2.

- SMBv2/3 support via jcifs-ng
- Ability to deindex local folders

[Changes][v3.4-smb]

v3.3.1 Google Play beta release - 2019-03-11

Testing branch: this release is based on minSDK 21, targetSDK 27, NDK-r19, ffmpeg 4.2.

- New TV show categories on TV interface for quicker browsing through large collection

- Countless TV UI improvements (player look and feel, roles, movies trailers, audio badges, global deletion/de-indexation, subtitles picker, more dynamic banners)
- New player shortcuts (A/S switch audio/sub track, U/D = volume up/down) and menu support
- Improve audio passthrough stability
- Fix crash in presence of damaged sdcard
- Fix cloud support (still no streaming)
- Do not downmix to stereo on phones/tablets if Android is recent enough (N): delegate to Android

[Changes][v3.3]

v6.3.28 release - 2025-02-02

- fix external long subtitles being skipped

Changes

v6.3.27 release - 2025-02-02

- fix crash on external ssa subtitles

Changes

v6.3.26 release - 2025-02-01

- fix text subtitles not displayed sometimes
- synced with new crowdin translations

Changes

v6.3.25 release - 2025-01-31

- align with next google play release

Changes

v6.3.24 release - 2025-01-29

- fix UPnP video library disappearing sometimes

Changes

v6.3.23 release - 2025-01-28

- enable passthrough for all since detection mechanism does not work for SPDIF (only works with HDMI)

Changes

v6.3.22 release - 2025-01-22

- switch back to mediacodec for audio decoding with ffmpeg fallback when not in passthrough

Feedback expected from users using an Android TV TV set using stereo speakers (no AV receiver) and reporting great sound experience on AC3 or DTS and stereo downmix when using previous releases.

Changes

v6.3.21 release - 2025-01-22

- release candidate for Google Play, amazon, and F-Droid

Changes

v6.3.20 release - 2025-01-18

- real regression fix for not scanning external usb storage devices when adding files to external storage
- real fix for external & pgs subtitles stuck sometimes

Changes

v6.3.19 release - 2025-01-18

- fix regression of not scanning external usb storage devices
- fix external subtitles stuck sometimes
- handle more subtitle position tag formats (e.g. `\{\{\an8\}`)
- Android frame synchronization for smoother playback disabled by default pending some AV desync fix
- stability enhancements

Changes

v6.3.18 release - 2025-01-12

- add more technical information on Android TV info playing tile (screen HDR capabilities and current mode, supported refresh rates and current one, HDMI receiver audio capabilities)
- better foreground state detection to not launch service if in background
- stability enhancements

Changes

v6.3.17 release - 2025-01-09

- smoother video playback with new experimental Android frame synchronization (can be disabled in expert options)
- stability enhancements

Changes

v6.3.16 release - 2025-01-05

- apply ITU-R BS.775-3 coefficients for stereo downmixing
- fix NFO relocation regression (long lasting)
- fix nova use as external player with kodi
- fix 7.1 stereo downmix
- fix filename containing "#" not playing with some network share protocols (sftp, sshj, webdavs)
- try to use jcifs internal nova library instead of device one if it exists

Changes

v6.3.15 release - 2024-12-21

- stability enhancements
- smbj 0.14.0 upstep
- sshj 0.39.0 upstep
- 2025 android TV banners

Changes

v6.3.14 release - 2024-12-13

- stability enhancements
- new experimental Android frame synchronization expert option to test if it improves playback fluidity

Changes

v6.3.13 release - 2024-12-11

- true passthrough support of TrueHD and DTS:X on Fire stick 4k max 2023 -- requires nova encapsulation mode 1

Changes

v6.3.12 release - 2024-12-10

- select proper dolby vision codec depending on profile
- fix wrong internal subtitle selection based on language regression

Changes

v6.3.11 release - 2024-12-09

- fix SMB discovery with freebox NAS SMB server when using smbj
- center text subtitles
- resume scrape at last video scrape instead of restarting when scan is interrupted

Important note: due to limitations imposed by Google when switching to API 34, foreground processes have not been granted to nova for background video media information retrieval. This

means that nova cannot scan videos in background and full scan needs to be performed when nova is in foreground. Coping with this constraint required some intrusive modifications that could result in some regressions and debug: hence the pre-release tag.

Changes

v6.3.10 release - 2024-12-08

- support subtitles position SSA tags
- better video identification logic

Important note: due to limitations imposed by Google when switching to API 34, foreground processes have not been granted to nova for background video media information retrieval. This means that nova cannot scan videos in background and full scan needs to be performed when nova is in foreground. Coping with this constraint required some intrusive modifications that could result in some regressions and debug: hence the pre-release tag.

Changes

v6.3.6 release - 2024-11-22

- fix on pgs subtitles duration computation

Changes

v6.3.5 release - 2024-11-20

- completed pgs subtitles support
- gfx subtitles display rework (no scaling and repositioning possible) relying on ffmpeg decoding
- fix cycling through subtitles list with keycode

Changes

v6.3.4 pre-release - 2024-10-25

- add pgs subtitles support
- upgrade to ffmpeg 7.1, dav1d 1.5.0
- disable by default use Android timely frame posting for smoother playback since it causes some playback issues

Changes

v6.3.3 pre-release - 2024-10-06

- smoother playback: use Android timely frame posting

Please report any regression in playback and seek related to this release.

Changes

v6.3.2 pre-release - 2024-09-25

- upgrade to ffmpeg 7.0.2
- add locale setting in nova for devices with restricted language support
- target SDK 34 to comply with Google API rules
- fix network shortcuts host check to accept FQDN with TLD larger than 6 characters

Changes

v6.2.95 release - 2024-08-27

- stability enhancements

Changes

v6.2.93 release - 2024-08-17

- rationalize Chinese language strings

Changes

v6.2.92 release - 2024-08-17

- fix traditional Chinese getting English video descriptions
[#1129](#)

Changes

v6.2.91 release - 2024-08-16

- fix PIP not working anymore
- revert to ffmpeg 4.4.5 to avoid playback regressions
- add Brazilian language for TMDB video descriptions

Changes

v6.2.90 release - 2024-07-07

- Other scraper issues fixed

Changes

v6.2.89 release - 2024-07-07

- Fix several scraper crashes seen on sentry

Changes

v6.2.88 release - 2024-06-29

- Fix none subtitle track not applied at resume

Changes

v6.2.87 release - 2024-06-25

- Fix subtitles not found in some cases
- Fix default opensubtitles search in Chinese and Portuguese variants not set correctly
- Enhance opensubtitles search stability
- Use correct reference to opensubtitles.com instead of opensubtitles.org that was misleading in some translations
- Fix incorrect Chinese subtitle language naming reported in Video information view

Changes

v6.2.86 release - 2024-06-22

- Google play release candidate

Changes

v6.2.85 release - 2024-06-20

- Fix one case of scan in loop

Changes

v6.2.84 release - 2024-06-17

- Switched back to previous sardine-android to fix webdav regressions
- Fixed subtitle track not applied on next episode with binge mode play mode
- Fix smbj rename

Changes

v6.2.82 release - 2024-06-16

- Fix random subtitles being selected sometimes
- Bump commons-net to 3.11.1, jsch to 0.2.18, sentry to 7.10.0, sardine-android to 0.9

Changes

v6.2.81 release - 2024-06-09

- Fix favorite lang/sub not applied in binge watching mode
- tmdb-java bump to 2.11.0

Changes

v6.2.79 release - 2024-05-29

- Use jupnp 3.0.2 for UPnP stack instead of deprecated cling

- Fix regression in oauthDialog

/!\ Please test UPnP and report any issue.

Changes

v6.2.78 release - 2024-05-28

- Select correctly external track with video.mkv and video-PL.srt and preferred language is Polish
- Desugaring is mandatory for old android version to avoid NoClassDefFoundError (e.g. smbj) and some missing java classes on Android (e.g. java.time etc.)
- commons-net upstep to version 3.10.0

Changes

v6.2.77 release - 2024-05-26

- More subtitle fixes on latest refactoring
- Stability enhancements

Changes

v6.2.76 release - 2024-05-25

- Refactored subtitle selection logic: if external srt is present and no matching language is found it is selected
- Stability enhancements

Changes

v6.2.75 release - 2024-05-19

- Fix default subtitle selection logic
- Some stability enhancements

Changes

v6.2.74 release - 2024-05-12

- Revert from junpn to cling because of errors seen on sentry

Changes

v6.2.73 release - 2024-05-11

- Ugly fix to apply change of internal subtitle track (FIXME: it makes video seek)
- Simplify subtitle language detection based on filename analysis for external subtitle files

Changes

v6.2.72 release - 2024-05-09

- Use junpn 3.0.2 instead of cling for UPnP /!\ please report any issue with UPnP
- Many subtitles naming detection fixes
- Pass prefetched/local subtitles as files and not http URIs to external video players to fix encoding issues for JustPlayer
- Nova icon update for Google Play compliance

Changes

v6.2.71 release - 2024-05-04

- Fix hide subtitles by default not working for internal subtitles regression
- More fixes for posters and trailer images not downloading on old Android version

Changes

v6.2.70 release - 2024-04-28

- Fix hide subtitles by default not working regression
- Fix subs not passed to external video player
- Really fix posters not downloading on old Android version
- Now Android TV icon is compliant with Google Play requirements

Changes

v6.2.69 release - 2024-04-19

- Fix poster download on old Android versions where system CA are outdated

Changes

v6.2.67 release - 2024-03-30

- Fix notification icon

Changes

v6.2.66 release - 2024-03-30

- Android TV icon update for Google Play compliance

Changes

v6.2.65 release - 2024-03-19

- Fix sentry change of behavior reporting okhttp3 50x error messages

Changes

v6.2.64 release - 2024-03-15

- Add Android 12 match frame rate feature support for refresh rate selection (new mode in nova settings)
- Get back to EOL cling since junip not yet stable
- Subtitles fixes

Changes

v6.2.63 release - 2024-02-18

- UPnP network shares: use jupnp Java library instead of EOL cling

Please report any issue with UPnP here [#74](#)

[Changes](#)

v6.2.62 release - 2024-02-17

- Unify scraper language settings
- Global better ordering of language menus in settings
- Make Traditional Chinese appear in scraper languages
- Stability enhancements

/!\ This release will revert to default scrape language.

[Changes](#)

v6.2.61 release - 2024-02-16

- Scrape shows and movies without air date reported by TMDb
- Remove deprecated old opensubtitles.org subs downloader
- Stability enhancements

[Changes](#)

v6.2.59 release - 2024-02-15

- Stability enhancements

[Changes](#)

v6.2.58 release - 2024-02-10

- Fix preferred audio language not applied
- Fix some remaining UI not responsive until back pressed on subs download in case of errors
- Stability enhancements

[Changes](#)

v6.2.57 release - 2024-02-09

- Fix cannot download subs when logged in on opensubtitles.com
- Propose nova as external player when opening local files
- Stability enhancements

Note: this release does not contain the new jupnp UPnP client.

Changes

v6.2.55 release - 2024-02-03

- Fix subtitles download for videos on UPnP shares
- Subtitles download stability enhancements

Changes

v6.2.54 release - 2024-01-27

- Add preferred audio language option for multi audio track videos
- Prevent opensubtitles subtitles download when out of quota

Changes

v6.2.53 release - 2024-01-20

- Handle webdav 302 redirect for real-debrid support
- Upstep jsch to 0.2.16, sshj to 0.38.0
- Stability enhancements

Changes

v6.2.52 release - 2024-01-14

- Another attempt to fix ftp (please report if you experience issues)
- Stability enhancements

Changes

v6.2.51 release - 2024-01-12

- libyuv upstep aligned on chromium master
- Stability enhancements

Changes

v6.2.50 release - 2024-01-10

- Fix duplicate subs listed in VideoInfo for smbj shares

Changes

v6.2.49 release - 2024-01-09

- Assume writeable directories on jcifs-ng
- Stability enhancements

Changes

v6.2.48 release - 2024-01-08

- Fix F-Droid build
- Update Video information fragment if subtitles have been downloaded during playback or video has changed
- Fix more error found in play mode

Changes

v6.2.47 release - 2024-01-07

- Cleaner Android TV years banner
- Better detect external subtitle language from filename
- Update Video information fragment if subtitles have been downloaded during playback
- Faster subtitle check on Android TV
- Fix an issue in play mode (folder mode fixed?)

Changes

v6.2.46 release - 2024-01-05

- Fix various subtitles issues

Changes

v6.2.44 release - 2024-01-03

- Bump ffmpeg to 6.1.1

Changes

v6.2.43 release - 2024-01-03

- Handle properly gesture navigation screen layout in player UI

Changes

v6.2.40 release - 2023-12-22

- Enforce new opensubtitles REST-API with quotas becoming mandatory in in January
- Disable gesture control when player screen is in locked mode
- New nova icon
- 2024 Android TV by year banners
- Attempt to support WebDAV 302 redirects
- Remember none subtitle track selection on resume
- Update boost to 1.84.0, libtorrent to 2.9.0
- Fix AV1 decoding regression
- Stability enhancements

Changes

v6.2.38 release - 2023-11-27

- Gesture stability enhancements

Changes

v6.2.37 release - 2023-11-26

- Add player gesture control
- Increase new opensubtitles REST-API downloader robustness

Following gestures are now supported:

- double tap on left/right regions of the screen for +-10s seek backward/forward
- scroll on left/right regions of the screen for brightness/volume increase/decrease

Two OSD regions have been added on top left/right screen part to display the fast rewind/forward icons and volume/brightness levels.

Changes

v6.2.36 release - 2023-11-21

- New nova icon
- opensubtitles subtitles download based on REST-API stability enhancements
- Update smbjs to 0.13.0, ffmpeg to 6.1, dav1d to 1.3.0

Please report any multimedia regression with ffmpeg 6.1 (e.g. AV1 is broken right now).

Changes

v6.2.35 release - 2023-11-14

- Stability enhancements (crash on multi-selection subtitles download)
- Attempt to fix ftp on Android 7.1.2 devices cf. [#829](#)

Changes

v6.2.34 release - 2023-11-12

- New nova icon
- Add possibility to use new opensubtitles REST-API instead of XML-RPC that will be enforced in January
- Update jcifs-ng to 2.1.10, commons-net to 3.10.0, sshj to 0.37.0

- Add missing anime shows by alpha on Android TV
- Avoid top/bottom grey bars on chromebooks while playing videos

/!\ Please check new OpenSubtitles REST-API by activating it in nova settings and report any issue. OpenSubtitles will enforce use of this new API starting January 2024 and imposes download quotas (20 subs per day for a registered user, 5 otherwise). Note that you will need an opensubtitles.com account (and not an opensubtitles.org one)!

Changes

v6.2.33 release - 2023-10-29

- Fix F-Droid checkupdates bot release pickup

Changes

v6.2.32 release - 2023-10-15

- Update jcifs-ng to 2.1.10, commons-net to 3.10.0, sshj to 0.37.0

/!\ Please test if this release breaks ftp on firestick4k (not the max version) cf. [#829](#)

Changes

v6.2.31 release - 2023-10-10

- Fix hide subtitles by default not working regression
- Restore directories listed first when sorting by name

Changes

v6.2.30 release - 2023-09-29

- Final design to only disable SMB UDP discovery to cope with Fire 10 HD Wi-Fi issues

Changes

v6.2.29 release candidate - 2023-09-24

- Fix smbjs not asking credentials when browsing an SMB server without guest account
- ffmpeg 4.4.4 upstep with DoVi patches
- dav1d 1.2.0 upstep
- openssl 1.1.1w upstep
- opus master upstep

Changes

v6.2.28 release candidate - 2023-09-23

- Add an option to limit SMB discovery to mDNS disabling TCP/UDP discovery that makes Wi-Fi drivers on some devices (e.g. Fire 10 HD) to crash and turn off Wi-Fi. Note that TCP/UDP discovery is required for proper ChromeOS SMB discovery.

Changes

v6.2.17 release - 2023-06-23

- Fix CI

Changes

v6.2.16 release - 2023-06-22

- Attempt to solve voice search on Android 11 (shieldTV)
- Do not crash if tmdb backend has outage
- Add m3u support in manifest (TBC if it works)

Changes

v6.2.15 release - 2023-06-18

- Fix A/V desync using playback speed
- Switched to jsch-mwiede fork for SFTP
- Use java 17

Changes

v6.1.6 release - 2023-04-04

- Add tx3g (mov_text) subtitles support

Changes

v6.0.97 release - 2023-02-12

- Fix ftp regression on some firesticks
- Stability enhancements

Changes

v6.0.96 release - 2023-02-08

- Fix SMB1 regression on some NAS
- Perhaps fix F-droid not picking up new nova releases

Changes

v6.0.95 Google Play release - 2023-02-04

- More subtitles shades of grey
- Stability enhancements

Changes

v6.0.94 release - 2023-01-23

- Experimental playback speed option: fix subtitles not in sync and crash using bluetooth headsets
- Option to disable Dolby Vision decoder
- Pass list of subtitles to external video players

Changes

v6.0.93 release - 2023-01-02

- Stability enhancements

- External player compatibility: mark video as watched with Just Player upon video completion
- Attempt to rework internal storage import service to avoid non visible crash in background

Changes

v6.0.89 release - 2022-12-10

- Support more ssa subtitle style formats
- Fix SMB shortcut with empty user (guest) on AndroidTV
- 2023 banners for AndroidTV

Changes

v6.0.88 release - 2022-11-29

- Target API33
- boost/libtorrent 1.80.0/2.0.8 upstep
- jcifs-ng SMB upstep to latest master
- Bundle delivery to Google Play
- Stability enhancements

Changes

v6.0.87 release - 2022-11-21

- Fix infinite loop in refreshrate negotiation
- Stability enhancements

Changes

v6.0.83 release - 2022-11-13

- Increase number of subtitles track supported to 64
- Stability enhancements

Changes

v6.0.82 release - 2022-11-12

- Experimental playback speed option is back but disabled by default (could cause choppy video)
- Better movie scrape results through applying Levenshtein distance on tmdb scrape results
- Hidden advanced option to enable specifying lavc parser sync mode (PTS or sample)

Changes

v6.0.81 Google Play release - 2022-11-08

- Re-disable experimental playback speed control due to instabilities

Changes

v6.0.80 Google Play release - 2022-11-05

- Fix db update crash

Changes

v6.0.79 Google Play release - 2022-11-05

- Crowdin translations synchronization
- Stability enhancements

Changes

v6.0.76 Google Play release - 2022-10-26

- Disable experimental playback speed control for now since causes regressions

Changes

v6.0.75 Google Play release - 2022-10-23

- Experimental playback speed control stability improvements (only when not using audio passthrough)
- Stability enhancements

Changes

v6.0.71 release - 2022-06-23

WARNING: this v6 release of Nova consists in a major update compared to v5 and requires to rescan all video collection for multimedia information re-aquisition. It is strongly advised to restart from a clean install to avoid problems. Please check FAQ for details.

Incremental release changelog compared to previous v6 github release:

- Stability enhancements

v6 release changelog short summary compared to v5:

- Add support for movie collections/sagas on Android TV
- Separate section for animation movies and series on Android TV
- Switch to tmdb instead of tvdb for TV shows information retrieval
- Faster TV shows media information retrieval
- Fix crash on Android 12/S/API31
- Properly report DTS-HD and DTS-HD MA
- Dolby vision support
- ffmpeg 4.4.2 and dav1d 1.0.0 integration
- Add MDNS samba discovery
- New refresh rate selection algorithm optimizing judder effect
- Add domain option to samba network credential dialog
- Optimize network shares rescan speed in case of files delete/rename
- Binge watching play mode
- Display content rating and better audio/resolution tag on lean-back
- STOP remote button stops player
- Add https streaming support

- Swedish, Greek, Traditional Chinese, Ukrainian translations in progress
- Add adult scrape hidden option NOT on google play
- Speed up initial local storage video import blacklisting whatsapp files before import
- Fix trakt tvshow sync
- Target API31 (warning: relocation of nfo/jpg for local storage videos)
- Sentry crashanalytics backend integration
- Make animation row optional on android TV
- Add more blacklisted local storage directories to speed up media import
- Add possibility to exclude network shortcuts from automatic/scheduled/manual global rescans on Android TV
- Optimize launch time on Android TV
- Fix youtube trailers not opening on youtube app on Android TV
- Add traditional Chinese, Brazilian, Ukrainian, Kurdish scrape/subs support
- Fix trakt multi-devices last played synchronization
- jcifs-ng SMB upstep
- SMB3 enabled by default (please test and report regressions!)
- Capability to add manual SMB shortcuts on ADTV
- 2022 year banners on ADTV
- Play button is first on tvshow all episodes view on ADTV
- Remove duplicate downmixing setting on phone/tablet UI
- Fix cannot play SMB file resulting from search result
- Stability enhancements

More detailed migration notes:

- This new version upgrades the internal nova media database to a new scheme and any downgrade to v4/v5 versions of nova will wipe out your entire video collection to prevent any incompatibility.
- This version switches to theMovieDb for retrieving TV shows information instead of theTvDb. It is strongly recommended to rescrape all your TV shows or start from a fresh install.
- Proper support for movie collections and animation movies/series on AndroidTV requires some manual steps. Acquisition of the additional movie collection informations and movies/TV series genres realignment requires a full rescrape of your video without interference of existing .nfo files (that do not yet contain the required information). For that purpose the following steps should do the trick:
 - backup all your customized handcrafted .nfo file (if you have any)
 - install nova version 6.xx
 - in nova settings unselect "process '.nfo' files"
 - in nova settings launch a "rescrape all" and wait for completion

- in nova settings launch an "export already scraped videos" and wait for completion (**this step will override any existing .nfo file**)
- versions later than v6.0.30 targets API31 and due to Android storage restrictions for API30, local NFO/JPG media information files for videos stored on local storage have been moved to nova public application folder located /sdcard/Android/data/org.courville.nova/files/nfoPoster
- If you ever want to get back to nova v5.xx, you will need to clean application data *and cache*

Changes

v6.0.70 release - 2022-06-21

- Play button is first on tvshow all episodes view on ADTV
- Remove duplicate downmixing setting on phone/tablet UI
- Fix cannot play SMB file resulting from search result
- Stability enhancements

Changes

v6.0.67 release - 2022-06-05

WARNING: this v6 release of Nova consists in a major update compared to v5 and requires to rescan all video collection for multimedia information re-aquisition. It is strongly advised to restart from a clean install to avoid problems. Please check FAQ for details.

- This version switches to theMovieDb for retrieving TV shows information instead of theTvDb. It is strongly recommended to rescrape all your TV shows or start from a fresh install.
- Proper support for movie collections and animation movies/series on AndroidTV requires some manual steps. Acquisition of the additional movie collection informations and movies/TV series genres realignment requires a full rescrape of your video without interference of existing .nfo files (that do not yet contain the required information). For that purpose the following steps should do the trick:
 - backup all your customized handcrafted .nfo file (if you have any)
 - install nova version 6.xx
 - in nova settings unselect "process '.nfo' files"

- in nova settings launch a "rescrape all" and wait for completion
- in nova settings launch an "export already scraped videos" and wait for completion (**this step will override any existing .nfo file**)
- versions later than v6.0.30 targets API31 and due to Android storage restrictions for API30, local NFO/JPG media information files for videos stored on local storage have been moved to nova public application folder located /sdcard/Android/data/org.courville.nova/files/nfoPoster
- If you ever want to get back to nova v5.xx, you will need to clean application data *and cache*

Changes

v6.0.66 release - 2022-05-15

- Add possibility to exclude network shortcuts from automatic/scheduled/manual global rescans on Android TV
- Optimize launch time on Android TV
- Stability enhancements

Changes

v6.0.65 release - 2022-05-08

- Make animation row optional on android TV
- Add more blacklisted local storage directories to speed up media import
- Stability enhancements

Changes

v6.0.64 release - 2022-05-03

- Stability enhancements
- New address for Sentry debug backend integration (crashlytics)

Changes

v6.0.63 amazon release - 2022-04-24

- Stability enhancements
- Fix adaptive refresh rate selection on firestick
- ffmpeg 4.4.2 and dav1d 1.0.0
- Fix fdroid build

Changes

v6.0.62 amazon release - 2022-04-18

Compared to previous release:

- Stability enhancements
- revert to ffmpeg 4.4.1 due to regression reported

Changes

v5.15.21 Google Play release - 2021-09-01

- Fix crash on Android 12/S/API31
- Full screen display is enabled by default even on displays with cutouts
- Properly report DTS-HD and DTS-HD MA
- ffmpeg 4.4 and dav1d 0.9 integration

Changes

v5.15.20 Google Play release - 2021-05-09

- Better tv show subtitle download based on IMDB ID
- Disable delete on UPnP shares not supporting it

Changes

v6.0.10 beta release - 2021-03-26

- Add support for movie collections/sagas on Android TV
- Separate section for animation movies and series on Android TV

- Faster TV shows media information retrieval
- Fix scraping counter calculation on AndroidTV
- WARNING: media db upgrade to version 38 (any downgrade will wipe out your meta data)

Important migration note:

- This new version upgrades the internal nova media database to a new scheme and any downgrade to v4/v5 versions of nova will wipe out your entire video collection to prevent any incompatibility.
- Proper support for movie collections and animation movies/series on AndroidTV requires some manual steps. Acquisition of the additional movie collection informations and movies/TV series genres realignment requires a full rescrape of your video without interference of existing .nfo files (that do not yet contain the required information). For that purpose the following steps should do the trick:
 - backup all your customized handcrafted .nfo file (if you have any)
 - install nova version 6.x
 - in nova settings unselect "process '.nfo' files"
 - in nova settings launch a "rescrape all" and wait for completion
 - in nova settings launch an "export already scraped videos" and wait for completion (**this step will override any existing .nfo file**)

Changes

v5.15.19 Google Play release - 2021-03-19

- Fix occasional SMB2/3 timeouts
- Add support for coloured TV remote buttons via HDMI-CEC
- ffmpeg version 4.3.2 and dav1d version 0.8.2 upstep

Changes

v6.0.5 movie collection experimental release - 2021-01-17

- Align with v5.16.17 with movie collections/sagas support on top

Changes

v5.15.17 Google Play release - 2021-01-17

- SMBv2/3 support via jcifs-ng
- Use DNS,BCAST default SMB resolver order to avoid slow SMB share responses in some network configurations
- Allow AV1 hardware decoding
- Switch to NDK r22

Changes

v4.49.16 F-Droid only release - 2021-01-09

- Attempt to fix F-Droid server build
- dav1d update to 0.8.1

Changes

v6.0.4 movie collection experimental release - 2021-01-07

- Align with v5.16.16 with movie collections/sagas support on top

Changes

v5.15.16 Google Play release - 2021-01-07

- Align with v4.49.15 with latest jcifs-ng on top for SMBv2/3 support
- Fix non systematic wrong IP selected when browsing SMB shares
- New debug infrastructure based on slf4j/logback
- New 2021 banner icons for AndroidTV
- dav1d update to 0.8.1

Changes

v5.15.15 SMBv2/3 not so experimental release anymore - 2020-12-08

- SMBv2/3 support via jcifs-ng
- Align with v4.49.15

Changes

v4.49.15 Google Play release - 2020-12-08

- SMB1 support only rollback release aligned with v5.15.14 without jcifs-ng support to address SMB issue seen in the field
- Fix anime playback using opus track using libopus instead of platform one
- Update trakt/tmdb/thetvdb-java libraries to 6.8.5/2.2.0/2.4.0
- Restrict nova webview to nova usage
- Stability enhancements

Changes

v5.15.14 Google Play release - 2020-12-06

- SMBv2/3 support via jcifs-ng
- Attempt to fix SMB on WD Mycloud with guest login

Changes

v4.49.14 rollback release for people with SMB issue - 2020-12-06

Release for people having SMB connection issues with latest v5 releases.

Changes

v6.0.3 experimental release for movie collections - 2020-12-03

- Align with v5.15.13 with movie collection/saga support

Changes

v5.15.13 Google Play release release - 2020-12-03

- Align with v4.49.11 with latest jcifs-ng on top
- Fix SMB timeout happening on some servers (jcifs-ng resolver)

Changes

v6.0.1 experimental release: support for movie collection - 2020-11-29

- Add support for movie collections/sagas for AndroidTV leanback interface

Important note for migrating: all already scraped movies do not contain any information about collections. In order to add this missing information you need to rescrape the full movie collection. A setting has been added to perform this task. However, by default nova does process .nfo files which are exported part of the scraping which also does not contain movie collection information in order to speed up the scraping process. These .nfo files when triggering a rescrape would be processed and would result into again no information found on collections. Thus in order to get the movie collection data you need either to: deinstall/reinstall nova and delete all .nfo files on your internal storage or network shares or to follow these steps:

- install nova version 6.x
- in settings unselect "process '.nfo' files"
- in settings launch a "rescrape all movies" and wait for completion
- in settings launch an "export already scraped videos" and wait for completion

Current limitations:

- sometimes there is no poster/backdrop found for a collection: this is simply because TheMovieDb does not reference one

Changes

v5.15.12 github release with SMBv2/3 support - 2020-12-03

- v4.49.12 with SMBv2/3 support via jcifs-ng on top

Changes

v5.15.11 Google Play release - 2020-11-29

- SMBv2/3 support via jcifs-ng
- Fix anime playback using opus track using libopus instead of platform one
- Update trakt/tmdb/thetvdb-java libraries to 6.8.5/2.2.0/2.4.0
- Restrict nova webview to nova usage
- Stability enhancements

Changes

v4.49.12 Google Play release - 2020-12-03

- Rollback to SMBv1 support only due to timeout issues with SMBv2 former release experienced by some users

Changes

v5.15.10 Google Play beta release - 2020-10-23

- SMBv2/3 support via jcifs-ng
- Align with v4.49.11

Changes

v4.49.11 Google Play release - 2020-10-23

- Stability enhancements

Changes

v5.15.9 Google Play beta release - 2020-10-20

- SMBv2/3 support via jcifs-ng
- Align with v4.49.10

Changes

v4.49.10 Google Play release - 2020-10-20

- Fix folder play mode
- Correct subtitles download failing while playing video on local storage

Changes

v4.49.9 Google Play release - 2020-10-13

- Fix time displayed at video start on Android TV regression

Changes

v5.15.7 SMBv2/3 Google Play beta release - 2020-10-11

- SMBv2/3 support via jcifs-ng
- Align with v4.49.8

Changes

v4.49.8 Google Play release - 2020-10-11

- Do not stop local video playback on network connectivity change
- Use new nova icon for search bar
- Fix search crash on old Amazon firesticks
- Fix wrong player layout when screen rotation is locked and video started in portrait

Changes

v5.15.6 SMBv2/3 not so experimental release anymore - 2020-09-25

- SMBv2/3 support via jcifs-ng
- Fix guest login on win10
- Align with v4.49.7

Changes

v5.15.5 SMBv2/3 not so experimental release anymore - 2020-09-17

- Align with v4.49.7
- SMBv2/3 support via jcifs-ng

Changes

v5.15.4 SMBv2/3 not so experimental release anymore - 2020-07-31

- Align with v4.49.6
- SMBv2/3 support via jcifs-ng

Changes

v4.49.7 Google play release - 2020-09-17

- Display external storage label/description on AndroidTV
- Do not pollute subtitle manual picker with cached online retrieved subs
- Allow http video streaming
- chromeOS/Amazon UI fixes
- Add missing subtitles ISO639 code strings
- ffmpeg version 4.3.1 and dav1d version 0.7.1 upstep
- Stability enhancement

Changes

v4.49.6 Google Play release - 2020-07-31

- Fix video stopping often on arm64 due to latest ffmpeg upstep
- Revert to ffmpeg 4.3.2 and dav1d 0.7.0

Changes

v5.15.3 SMBv2/3 not so experimental release anymore - 2020-07-18

- Align with v4.49.5
- SMBv2/3 support via jcifs-ng
- fix SMB guest login on win10

Changes

v5.15.2 SMBv2/3 not so experimental release anymore - 2020-07-11

- Align with v4.49.5 with latest jcifs-ng on top

Changes

v4.49.5 Google Play release - 2020-07-11

- Fix x86 software decoding support (nexus player, non 64b chromebooks)
- Faster network scanning
- Stability enhancement

Changes

v5.15.1 SMBv2/3 experimental release - 2020-07-08

- Align with v4.49.3 with latest jcifs-ng on top
- Fix samba issues reported with WD MyCloud and with win10 guest login

Changes

v4.49.3 Google Play release - 2020-07-07

- better USB disk management on AndroidTV
- Stability enhancement

Changes

v4.49.2 release - 2020-07-06

- Fix OOM on Android TV with HDD plugged

Changes

v4.49.1 release - 2020-07-04

- Fix number of audio tracks limited to 6
- ffmpeg version 4.3.0 and dav1d version 0.7.1 upstep
- Stability enhancement

Changes

v4.48.17 internal release - 2020-06-27

- Sponsor icon
- Reduce full compilation strain for boost

Changes

v4.48.14 internal release - 2020-06-23

- new release versioning management

Changes

v4.48.13 internal release - 2020-06-20

- new release versioning management

Changes

v4.48.10 Google Play release - 2020-06-20

- Stability enhancement

Changes

v4.48.9 Google Play release - 2020-06-12

- Fix missing poster on some movies
- Fix playback not smooth regression on Sony and Philips AndroidTV
- Stretch mode is back
- Allow adaptive refresh rate on phones
- Improve A/V sync for some videos (PTS instead of sample based sync)
- ffmpeg version 4.2.3 and dav1d version 0.7.0 upstep
- Scraping improvements
- Stability enhancement

Changes

v4.48.8 release - 2020-05-30

- solve some A/V sync issues
- 0.7.0 dav1d and ffmpeg 4.2.3 upsteps
- faster boost compilation

Changes

v4.48.7 release - 2020-05-18

- Intermediate release for fdroid
- fix java_home for linux

Changes

v4.48.6 release - 2020-05-13

- Upgrade jsch for sftp support
- upgrade cling for UPnP support
- Stability enhancements

Changes

v5.14.8 Google Play beta release - 2020-05-12

- Fix SMB server protocol level detection scheme
- Stability enhancements

Changes

v4.48.5 release - 2020-05-13

- Upgrade jsch for sftp support

Changes

v5.14.7 Google Play beta release - 2020-05-10

- Experimental SMBv2/3 support with latest jcifs-ng
- Support for SMBv2 is disabled by default and can be enabled in settings
- Disable SMB1/SMB2 protocol negotiation when SMB2 server is detected
- jsch update for sftp
- Stability enhancements

Changes

v5.14.6 intermediate release - 2020-05-09

- Disable SMB1/SMB2 protocol negotiation when SMB2 server is detected

Changes

v4.48.4 Google Play release - 2020-05-10

Based on v4.48.3 with these changes:

- Stability enhancements

Changes

v5.14.5 Google Play beta release - 2020-05-09

- Align with v4.48.3 with latest jcifs-ng on top for SMBv2/3 support
- Support for SMBv2 is disabled by default and can be enabled in settings

Changes

v4.48.3 Google Play release - 2020-05-09

Based on v4.48.2 with these changes:

- Revert back jsch upstep since maven version without custom changes is too slow
- Stability enhancements

Changes

v5.14.4 SMBv2/3 experimental release - 2020-05-07

Align with v4.48.2 (unstable track) with following changes on top:

- Add SMBv2/3 support via jcifs-ng
- Support for SMBv2 is disabled by default and can be enabled in settings

Changes

v4.48.2 Google Play beta release - 2020-05-03

Align with v4.48.0 (unstable track) with following changes on top:

- Fix ability to open videos via http/https from another application
- Improved scraping results
- UI navbar correct color on Samsung
- jsch update for sftp
- Stability enhancements

Changes

v5.13.0 SMBv2/3 experimental release - 2020-04-18

Align with v4.48 (unstable track) with following changes on top:

- Add SMBv2/3 support via jcifs-ng

- Fix slow video start on SMB by avoid checking .nomedia on server root

Note that this release might experience interoperability issues when using SMBv1 only capable server.

Changes

v4.48.0 Google Play beta release - 2020-04-18

Align with v4.47 (unstable track) with following changes on top:

- Improve scraping results
- Stability enhancements

Changes

v5.12 SMBv2/3 experimental release - 2020-04-13

Align with v4.47 (unstable track) with following changes on top:

- Add SMBv2/3 support via jcifs-ng
- Fix samba file listing truncation when dealing with SMBv1 only servers
- Add opensubtitles credentials support in preferences since opensubtitles mandates it to download subtitles
- Fix an appcompat incompatibility with webview (Google bug)

Note that this release will experience interoperability issues when using SMBv1 only capable server.

Changes

v4.47 release - 2020-04-12

Align with v4.46 (unstable track) with following changes on top:

- Fix trakt resume point sync issues

Changes

v4.46 Google Play beta release - 2020-04-05

Align with v4.43 (unstable track) with following changes on top:

- Fix opensubtitles change requiring credentials to use API
- Fix DTSHD decoding crashes

Changes

v4.44 Google Play release - 2020-04-05

Align with v4.38 (stable track) with following changes on top:

- Fix opensubtitles change requiring credentials to use API
- Fix DTSHD playback crashing sometimes

Changes

v4.43 release - 2020-03-31

- Subtitle manual download improvement via scraped information search
- Better TV show scrape result through multi-language Levenshtein metric computation
- Refactored Tmdb and TheTVDb scrapers
- UI polishing on phones/tablets and partners logo refresh (trakt, tmdb, tvdb, imdb)
- AppCompat migration

Changes

v5.10 SMBv2/3 experimental release - 2020-03-02

- Align with v4.40 with latest jcifs-ng on top

Note that this release will experience interoperability issues when using SMBv1 only capable server.

Changes

v4.40 Google Play beta release - 2020-03-02

- Refactored Tmdb and TheTVDb scrapers
- Better TV show scrape result through multi-language Levenshtein metric computation
- Fix crash observed on play console
- Use new application icon for TV channels

Changes

v4.39 Google Play release - 2020-03-02

- Fix crash observed on play console
- Use new application icon for TV channels

Changes

v5.9 SMBv2/3 experimental release - 2020-03-01

- Align with 4.38 with latest jcifs-ng on top

Changes

v4.38 release - 2020-02-29

- Better show scraper with multi-lang Levenshtein metric computation
- Fix cloud storage (file picker) and folder picker on phones

Changes

v4.37 Google Play release - 2020-02-29

- Fix cloud storage (file picker) and folder picker on phones

Changes

v4.36 release - 2020-02-22

- Roll back to old MovieScraper2
- 10ms audio/video delay tuning
- Latest translations

Changes

v4.35 release - 2020-02-08

- Switch to Audiotrack audio interface for video fluidity
- Fix TV show Trakt progress sync
- tmdb-java movie scraper
- Adaptive refresh rate via API23 mode switch (fix FireTV4k)
- Fix grey bar on Sony for HDR content
- Fix green bar with swdec on Nvidia
- Fix audio night/boost mode
- Fix HEVC 10b on Rockchip
- Better MediaCodec extradata management
- Turkish/Simplified Chinese translations completed
- New app icon
- App bundles to reduce apk size
- Limit SMB discovery on local networks

Changes

v4.28.3 release (stable track) - 2020-02-08

- Fix TV show Trakt progress sync
- Fix grey bar issue on Sony when watching HDR content
- Fix green bars present in software decoding on Nvidia shield
- Fix audio regressions in night/boost mode
- Fix video not opening when enabling adaptive refresh rate on FireTV

Changes

v5.8 release - 2020-01-24

- Align with v4.33 with jcifs-ng on top

Changes

v4.33 release - 2020-01-24

- Fix regression in TV show not recognized due to TheTVdb backend unilateral change

Changes

v4.30 release - 2020-01-22

- Use Audiotrack vs. OpenSLES for audio interface improving video fluidity
- Fix TV show Trakt progress sync
- Disable periodic bookmark save interfering with video decoding perf over slow network shares
- Complete Turkish & Simplified Chinese translations
- New icon compliant with Google Play Store requirements
- Only launch SMB discovery on local networks

Changes

v4.29 Google play beta release - 2020-01-11

- Fix HEVC 10 bit support on Rockchip devices
- Better extradata management for AVC and HEVC for MediaCodec
- Stability enhancements

Changes

v4.28 Google play release - 2020-01-11

- Prefer ffmpeg over c2.android or omx.google software codecs to avoid multimedia issues on pixel3xl phone
- Stability enhancements

Changes

v4.27 Google Play beta release - 2020-01-05

- ffmpeg update to 4.2.2

- dav1d update to 0.5.2
- Break video import and scrape in small queries to avoid database window cursor issues
- Stability enhancement

Changes

v4.26 release - 2019-12-29

- Better scrape result through Levenshtein result distance computation
- Stability enhancement

Changes

v4.25 release - 2019-12-26

- Introduce stretched video format to fill entire display with video image (only way to preserve aspect ratio on recent Philips TVs!)
- Add Norwegian, Vietnamese scrape languages support
- 2020 year banners for Android TV
- Improve filename pre-processing garbage rules to improve scrape
- Prevent scrape notification to fire up when nothing is to be scraped
- Fix sftp indexing

Changes

v5.7 SMBv2 beta release - 2019-12-14

- Align with v4.24 with jcifs-ng on top

Changes

v4.24 Google Play release - 2019-12-14

- Fix more shows not being scraped correctly after thetvdb.com site changes
- Rollback on jcsh upgrade yielding issues on sftp
- Fix regression in pause/play with enter key on AndroidTV

- Fix some aspect ratio issues on devices where MediaCodec returns wrong video dimensions (firetv4k, rockchip, etc.)
- Reduce bottom player UI glitch on chromebook and rockchip leanback interfaces

Changes

v4.22 Google Play release - 2019-12-08

- Fix some shows not being scraped correctly after thetvdb.com site changes
- Fix player controller UI layout issues on tablets
- Update thetvdb-java to version 2.2.0

Changes

v4.21 Google Play release - 2019-12-08

- Faster AndroidTV display entering application
- Attempt to fix an UI glitch on Rockchip based TV boxes
- Stability enhancements

Changes

v5.6 SMBv2 beta release - 2019-12-01

Unstable branch: this release is based on minSDK 21, targetSDK 29, AndroidX libraries, NDK-r20, ffmpeg 4.2.1.

- Fix SMBv1 guest/anonymous auth on freebox

Changes

v4.20 Google Play release - 2019-12-01

Testing branch: this release is based on minSDK 21, targetSDK 29, AndroidX libraries, NDK-r20, ffmpeg 4.2.1.

- Stability enhancements

Changes

v4.18 Google Play beta release - 2019-11-22

Testing branch: this release is based on minSDK 21, targetSDK 29, AndroidX libraries, NDK-r20, ffmpeg 4.2.1.

- Fix player crashing in Dutch due to translation error
- Fix TV shows meta data retrieval issues due to TheTVdb.com backend changes

Changes

v4.16 Google Play beta release - 2019-11-16

Testing branch: this release is based on minSDK 21, targetSDK 29, AndroidX libraries, NDK-r20, ffmpeg 4.2.1.

- Migration to TheTVDB API v2 via thetvdb-java external library with request caching support
- Target API29 disabling scoped storage for now
- Indexing, scraping and file copy proper foreground notifications
- Stability enhancements

Remark: this version only supports SMBv1 (rollback due to problems reported with jcifs-ng switch)

Changes

v5.3 Google play beta release - 2019-11-03

Testing branch: this release is based on minSDK 21, targetSDK 29, AndroidX libraries, NDK-r20, ffmpeg 4.2.1.

- Leanback setting style for subtitles languages download
- Remove systematic video background reload in VideoDetails-Fragment on leadback when back from video play
- Stability enhancements

Changes

v5.2 Google play beta release - 2019-10-27

Testing branch: this release is based on minSDK 21, targetSDK 29, AndroidX libraries, NDK-r20, ffmpeg 4.2.1.

- Fix selection of torrent streaming download directory not selectable
- Indexing, scraping and file copy proper foreground notifications
- Stability enhancements

Changes

v5.1 unstable release - 2019-09-21

Unstable branch: this release is based on minSDK 21, targetSDK 29, AndroidX libraries, NDK-r20, ffmpeg 4.2.1.

- Switch to jcifs-ng to support SMBv2/3
- Target API29 (Android Q) and disable scoped storage for now
- Fix crash entering settings on phones with cutout

Changes

v4.15 Google Play release - 2019-09-21

Testing branch: this release is based on minSDK 21, targetSDK 28, AndroidX libraries, NDK-r20, ffmpeg 4.2.1.

- Fix resume point update on VideoInfoActivity and auto scraping of unknown files on network shares

Changes

v4.14 Google play beta release candidate - 2019-09-15

"Not so much anymore unstable branch": this release is based on minSDK 21, targetSDK 28, AndroidX libraries, NDK-r20, ffmpeg 4.2.1.

- Only switch to AudioTrack instead of openSLES to solve audio/video delay on Amlogic

- Upgrade to latest version of trakt-java containing NVP upstreamed contribution
- Add support for codepade 28606 - Latin-10 or South-Eastern European for subs

Changes

v4.13 Google play beta release candidate - 2019-09-08

"Not so much anymore unstable branch": this release is based on minSDK 21, targetSDK 28, AndroidX libraries, NDK-r20, ffmpeg 4.2.

- Switch to AudioTrack instead of openSLES to solve audio/video delay on some devices
- Disable for now UpNext row/channel preventing display of indexed folders
- Upgrade trakt-java library to solve two way sync

Changes

v4.12 Google play beta release candidate - 2019-08-29

"Not so much anymore unstable branch": this release is based on minSDK 21, targetSDK 28, AndroidX libraries, NDK-r20, ffmpeg 4.2.

- Fix HEVC decoding for some files on MTK based devices
- Do not revert on SW decoding in presence of high bitrate spike occurring on some 4k high bitrate videos

Changes

v4.11 Google play beta release candidate - 2019-08-28

"Not so much anymore unstable branch": this release is based on minSDK 21, targetSDK 28, AndroidX libraries, NDK-r20, ffmpeg 4.2.

- Fix coexistence with Archos Video Player

Changes

v4.10 Google play beta release candidate - 2019-08-22

"Not so much anymore unstable branch": this release is based on minSDK 21, targetSDK 28, AndroidX libraries, NDK-r20, ffmpeg 4.2.

- Fix video blacklisting on local storage

Changes

v4.9 Google play beta release candidate - 2019-08-21

"Not so much anymore unstable branch": this release is based on minSDK 21, targetSDK 28, AndroidX libraries, NDK-r20, ffmpeg 4.2.

- FFmpeg upstep to 4.2 and dav1d to 0.4.0
- Fix database crash preventing application to start on some custom ROMs

Changes

v4.8 unstable release - 2019-08-02

Unstable branch: this release is based on minSDK 21, targetSDK 28, AndroidX libraries, NDK-r20, ffmpeg 4.2.

- Fix database crash preventing application to start on some devices

Changes

v3.12 Google play beta release - 2019-08-02

Testing branch: this release is based on minSDK 21, targetSDK 27, NDK-r20, ffmpeg 4.2.

- Fix database crash preventing application to start on some devices

Changes

v4.7 unstable release - 2019-06-15
